Q6:- Problem in this code is that if we delete temp then we cant go to the next node. This code will delete the First node only.

Correct Code:-

```
Void deletelist ()
{
    node * temp = new node ();

    while (head ! = Null)

    {  temp = head;
       head = head -> next;

        Free (temp);
    }
}
```
